DETAILED ACTION

Claim Rejections - 35 USC 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Murch et al. (5,498,295).

The claims are rejected for the reasons of record cited in the last office action.

ARGUMENTS

Applicant's arguments filed 6-13-01 have been fully considered but they are not persuasive. Applicants argue that since Murch et al. does not disclose the amount of time that the composition remains on the fruit or vegetable and does not show a method of reducing microorganisms on a food surface. However, the reference recognizes that the composition can provide effective disinfectancy (col. 11, lines 4-11). The particular time period of in excess of one half a minute is not seen to give patentable weight. The discovery of an optimum value of a result effective variable is ordinarily within the skill of the art. In re Boesch, 617 F.2d 272, 276, 205 USPQ 215, 219 (CCPA 1980). In developing a product to reduce the amount of microorganisms on a food product, properties such as degree of removal of microorganisms are important. It appears that the precise ingredients as well as their proportions affect the degree of removal of the

Art Unit: 1761

microorganisms, and thus are result effective variables which one of ordinary skill in the art would routinely optimize.

Applicants argue that Murch does not recognize the importance of time and pH in achieving a reduction of microorganisms on the surface of a food. However, Murch discloses contacting a food with a composition which contains the claimed pH (col. 12, lines 46-55). Applicants are recognizing and giving weight to an inherent characteristic of the composition, and nothing new or unobvious is seen in this. See *In re Best et al.* 195 USPQ 430.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
